LED lighting in a pig barn can have a positive impact on productivity, several customers who have installed the lighting say. (Photo: Anne Wolfenberg)

## Great satisfaction with LED lighting in pig sheds

**Danish company receives a lot of positive feedback from customers for their LED lighting for pig pens.**

BY NIELS ROSDAHL JENSEN

Everyone involved in pig production knows that the pigs need good lighting. We've made it easy to use and set up, while being cheap to run.

So says Rune Nielsen, director of RN Solutions, which sells LED lighting for, among other things, pig barns. And when the company follows up

on the customers' experience with the product, it is abundantly clear that there is great satisfaction.

Almost 30 percent of only those think it is better than expected, while for the remaining 70 percent it lives up to expectations. And on several fronts, pig producers report higher productivity.

### Unique image

The survey was made by sending out questionnaires to customers. Rune Nielsen estimates that around half return with answers. And among the responses that come in, the picture is pretty unequivocally positive.

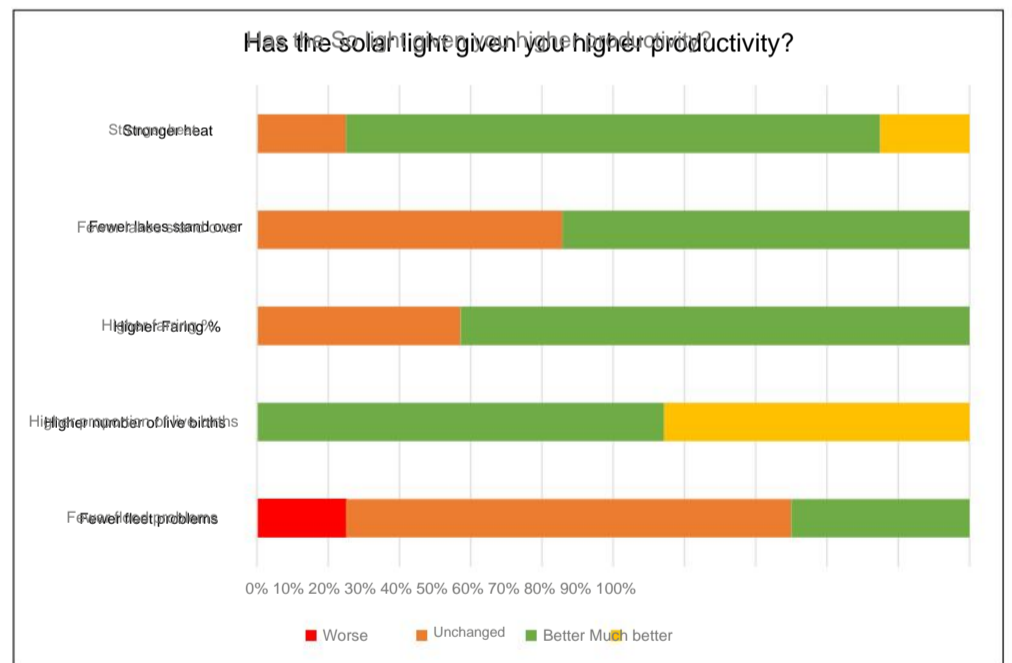

- We also call some of

the customers who have not replied, and there we get the same message, says Rune Nielsen.

### International recognition

This summer, the company won international honors in the wake of the World Pork Expo – the world exhibition for pig production. RN Solutions was singled out as one of the eight products at the fair that has the greatest potential to help the world's pig producers improve efficiency.
